Cross-Modal Evidence Extraction

Prompt: You are a visual evidence extractor for short-video fake-news detection. Do NOT decide real/fake. Extract only what the current video and...

Respond: Claim in Auxiliary Text: trust issues Kim Putin

Visible Scene Summary: Two men, identified as Kim Jong Un and Vladimir Putin, are at a formal dinner. They clink glasses, then immediately look away and down, appearing to avoid eye contact.

Visible Text or Captions: @lavidakahlo When you both have trust issues 🤔

Visible Entities: Kim Jong、Un Vladimir Putin、dinner table.

Video–Claim Relation: narrates_or_repeats_claim

Possible Mismatch Cues:

The text overlay explicitly states “trust issues.”

The humorous emoji suggests that the scene is framed for comedic effect.

Looking away is interpreted as evidence of distrust, although the gesture itself is ambiguous.

Rumor or Sensational Cues: Caption: “When you both have trust issues 🤔” Hashtag: #funny Hashtag: #viral

Ordinary News Cues: A formal meeting between two world leaders. A dinner setting with flowers and glasses. Real people appearing at a public event.

Prompt: You are an audio evidence extractor for short-video fake-news detection. Analyze only speech, narration, tone, background sound, and sensational audio cues. ...

Respond: Speech Transcript: Trust issues Kim Putin

Spoken Claims: Trust issues Kim Putin

Speaker Style: news_report

Emotion Tone: neutral

Rumor or Sensational Audio Cues: None

Audiovisual Consistency: consistent

Audio–Title Consistency: supports_title

Decision Relevance: high

Audio Summary: The speaker claims that there are trust issues between Kim Jong Un and Vladimir Putin.

Verifier Assisted Decision Arbitration

Prompt: You are a calibrated judge for short-video fake-news detection. Classify whether the CURRENT video news item is real or fake for dataset evaluation. ...

Respond: Label: real

Fake Score: 0.20

Confidence: 0.80

Reason: The retrieval prior indicates fake, but the video shows a formal dinner scene with real people, no explicit contradiction, and the claim is plausible within the context of a humorous caption.

Prompt: You are a verifier agent for the second-stage fake-news judge. Your default job is to validate the initial decision, not to freely re-decide the label.

Recommend a label change only for high-confidence initial-judge errors.

Correction policy: Default suggested_label must be keep...

Respond: Needs Revision: true

Suggested Label: fake

Confidence Adjustment: -0.10

Risk Type: retrieval_ignored

Review Reason:

The retrieval prior strongly favors fake with high strength, and the video's caption and framing suggest sensationalism, despite the visual content being plausible

Prompt: You are the final arbiter in a lightweight judge loop for short-video fake-news detection. Treat the initial decision as the default final label. The verifier review is only for catching high-confidence ...

Respond: Label: fake

Fake Score: 0.60

Confidence: 0.70

Reason: The retrieval prior strongly favors fake, and the video's caption and framing suggest sensationalism despite the visual content being plausible.
